Abhiram N

MERN STACK DEVELOPER

abhiramnksd@gmail.com | 7510724165 | LinkedIn | Portfolio

PROFESSIONAL SUMMARY

Full Stack Developer with 2 years of experience building web applications using React.js, TypeScript, Node.js, and Express.js. Experienced in developing REST APIs, real-time video calling using WebRTC and Socket.IO, and Docker-based deployment. Skilled in Clean Architecture and building scalable, maintainable web applications.

SKILLS

Programming: JavaScript, TypeScript

Frontend: React.js, Redux Toolkit, Tailwind CSS, SCSS, Bootstrap, EJS, HTML5, NextJS

Backend: Node.js, Express.js, REST APIs, JWT, Socket.IO, WebRTC

Architecture: Clean Architecture, Repository Pattern, MVC, SOLID Principles, OOP

Databases: MongoDB, PostgreSQL, Firebase

Cloud: Docker, AWS EC2, Nginx, Vercel, Render

Integrations: Razorpay, Cloudinary, Nodemailer, Google OAuth, Google APIs, WebRTC, Socket.IO

PROFESSIONAL EXPERIENCE

Full Stack Developer Trainee, Brototype — Oct 2024 - Oct 2026

- Developed responsive web applications using React.js, Next.js, and TypeScript, building reusable components and scalable user interfaces
- Implemented real-time video consultation using WebRTC and Socket.IO, enabling live video calls between users
- Built REST APIs and backend integrations to support authentication, role-based access control, and application features
- Containerized full-stack applications using Docker and worked on deployment and environment configuration

PROJECTS

HealthGate (Hospital Management System) — Project Link

- HealthGate is a full-stack hospital management system connecting patients, doctors, and administrators with appointment management, online payments, notifications, and real-time video consultations.
- Tech Stack: Node.js, Express.js, TypeScript, React.js, Vite, MongoDB, Socket.IO, WebRTC, Razorpay, Cloudinary, Nodemailer, Docker, Nginx
- Architected the backend using Clean Architecture and Repository Pattern
- Implemented JWT authentication and role-based access control for Patients, Doctors, and Admins.
- Built doctor availability, appointment scheduling, and 90-day booking restrictions.
- Integrated Razorpay for online payments and Cloudinary for patient profile image management.
- Developed real-time video consultations using WebRTC and Socket.IO with STUN/TURN.
- Containerized and deployed services using Docker, Docker Compose, and Nginx

UrbenNest (E-Commerce Platform) — Project Link

- A scalable e-commerce platform enabling users to order products online with secure payment integration, rolebased dashboards, and responsive design
- Tech stack: EJS, Node.js, Express.js, MongoDB, Razorpay
- Built a multi-role e-commerce system with separate admin and user dashboards
- Implemented product management workflows, automated invoice generation, and sales reporting
- Integrated Razorpay for secure and seamless online payments
- Designed and developed a fully responsive UI optimized for mobile and desktop
- Structured backend for scalability and maintainability using MVC principles
